

30KC Polymer Cartridge Seal

SEAL INSTALLATION

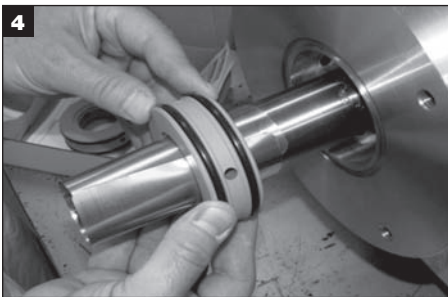

1
Cut 0.005" thick brass shim stock approx. 1/4" larger than circumference of the shaft.

2
Orient seal lips towards the shaft end.
NOTE: Lubricating the seal lips slightly facilitates installation.

3
Roll the shim stock and carefully pass through the seal.

4
Position the shim and the seal over the shaft.

5
Rotate the seal in the direction of the shim overlap and slide over the shaft.
CAUTION: Rotate the seal in the direction of the overlap to avoid lip damage.

6
Remove the shim and uniformly press the seal into the bore.
